Who We Are

At the Roche Group, about 80,000 people across 150 countries are pushing back the frontiers of healthcare. Working together, we've become one of the world's leading research-focused healthcare groups. A member of the Roche Group, Genentech has been at the forefront of the biotechnology industry for more than 30 years, using human genetic information to develop novel medicines for serious and life-threatening diseases. The headquarters for Roche pharmaceutical operations in the United States, Genentech has multiple therapies on the market for cancer and other serious illnesses. Please take this opportunity to learn about Genentech, where we believe that our employees are our most important asset and are dedicated to remaining a great place to work.

The Position

Our group is searching for an experienced and dynamic Device Development/Product Introduction Engineer to be responsible for design for manufacturability, assembly, testing, and the interaction between product design and manufacturing process development of parenteral drug delivery devices. This includes design, testing and transfer to production activities for a wide range of combination products, along with providing technical support to partners working on validation, quality and program management.

We are looking for a candidate that has the ability to affect change, deal with uncertainty and deliver to commitment in high quality manner. The environment is challenging, results oriented, and rewarding with opportunities for impact.

Who You Are

- BSME (or equivalent) with at least 8 years of experience in design or product transfers of medical devices (combination products a plus).
- Proven experience in providing engineering technical leadership to a team composed by internal members along with external development partners and component suppliers. Ability to interact at a detail technical level with both design engineers,

equipment and production engineers.

- Demonstrated success in project planning, resource management, liaison with engineering and manufacturing resources in other countries is critical to the position.
- In depth experience with high volume manufacturing processes and methodologies are required, with emphasis in plastic molding and mechanical assembly.
- Hands-on experience on developing control systems to be used in production and batch release. Strong expertise with statistical handling and interpretation of data.
- Familiarity with risk management tools; develop FMEAs of the products and ability to assess changes, non-compliances, etc. with risk assessments methods.

Genentech is an Equal Opportunity Employer.
