Pharmaceutical

### **Job Level**

Experienced

## **Who We Are**

At the Roche Group, about 80,000 people across 150 countries are pushing back the frontiers of healthcare. Working together, we've become one of the world's leading research-focused healthcare groups. A member of the Roche Group, Genentech has been at the forefront of the biotechnology industry for more than 30 years, using human genetic information to develop novel medicines for serious and life-threatening diseases. The headquarters for Roche pharmaceutical operations in the United States, Genentech has multiple therapies on the market for cancer and other serious illnesses. Please take this opportunity to learn about Genentech, where we believe that our employees are our most important asset and are dedicated to remaining a great place to work.

## **The Position**

The successful candidate will be involved in late-stage pharmaceutical development of monoclonal antibodies, antibody-drug conjugates, and delivery systems for clinical evaluation and commercialization. The responsibilities of this role include formulation development, evaluating product stability and throughout the manufacturing process and performance in diverse delivery systems, as well as biophysical characterization, drafting technical documents and contributions to regulatory filings. Applicants should be comfortable working both independently with minimal supervision and as part of a team to support the development of recombinant protein therapeutics. The successful candidate will also be expected to participate on cross-functional project teams. The position offers opportunities for professional and scientific growth in a dynamic, intellectually stimulating and fast-paced work environment.

## **Who You Are**

A B.S. or M.S. in biochemistry, chemistry, pharmaceuticals, chemical engineering or a related field with 3 to 10 years of relevant laboratory (industrial) experience is required. The candidate should have strong scientific/ analytical skills and experience characterizing

proteins with multiple chemical and biophysical techniques (SEC, IEC, RPLC, etc.) electrophoretic methods (icIEF, CE-SDS), spectroscopy, and other protein formulation/ biophysical characterization techniques. Strong oral and written communication skills, as well as excellent documentation and organizational skills are essential. The successful candidate should be highly self-motivated, and possess strong problem solving and interpersonal skills to facilitate cross-functional interactions and collaboration with others. Prior experience representing formulation development on cross-functional teams is requisite for the senior RA role. GLP experience is desirable.

Genentech is an Equal Opportunity Employer.
