

RA/SRA - Protein Biochemistry

Job ID: 00413476

Job Function

Research

Schedule

Full-time

Location

United States-California
South San Francisco

Job type

Regular Employee

Company/Division

Pharmaceutical

Job Level

Experienced

Who We Are

At the Roche Group, about 80,000 people across 150 countries are pushing back the frontiers of healthcare. Working together, we've become one of the world's leading research-focused healthcare groups. A member of the Roche Group, Genentech has been at the forefront of the biotechnology industry for more than 30 years, using human genetic information to develop novel medicines for serious and life-threatening diseases. The headquarters for Roche pharmaceutical operations in the United States, Genentech has multiple therapies on the market for cancer and other serious illnesses. Please take this opportunity to learn about Genentech, where we believe that our employees are our most important asset and are dedicated to remaining a great place to work.

The Position

Description -

An opportunity for a protein biochemist is available to join a chemical biology group in the Department of Early Discovery Biochemistry. The group uses a multidisciplinary molecular approach for target validation. Recent efforts focus on the use of peptide phage display and small molecule tools for modulating protein-protein interactions and fluorescence imaging of cellular proteins. The successful candidate will be responsible for producing proteins and peptides of therapeutic interest and their characterization by analytical methods (affinity purification, RP-HPLC, SDS-PAGE and western analysis). He/she will also investigate the functional mechanism of bioactive ligands by biochemical and cellular assays. This is a basic research position that requires critical thinking, flexibility, multitasking and the ability to learn

new techniques.

Who You Are

MS in biochemistry, chemistry or related discipline. Five or more years of technical experience in biochemistry or areas related to protein expression and purification, protein engineering, biochemical assays, construct design and molecular biology is required. Experience in tissue culture and cell biology is highly desirable. Candidate must be highly organized, motivated, work independently in a collaborative team-oriented setting, and have strong analytical, organizational, and communication skills.

Genentech is an Equal Opportunity Employer.
